SKILLS

- Languages/Skills: Java, HTML, CSS, JavaScript

PROJECTS

Java Snake Game

- Components: Java GUI provides the framework for graphical elements, JFrame serves as the main window structure, and JPanel acts as a container for game elements.
- Game Elements: The game includes a snake, which is a moving collection of segments, food items that are consumed to grow the snake, and obstacles that pose static or moving threats.
- Interaction: User input controls the snake's movement, while game logic manages the game's state, collision detection, and updates.

Barbie Website

- The website features an inspired design that reflects the upcoming movie, capturing its essence and excitement.
- Features: The website includes an interactive carousel for showcasing trailers and images, seamless social media integration to connect with fans.

Mini Portfolio Website

- Portfolio Content: It showcases a picture, a section detailing skills, and offers a downloadable resume for further exploration.
- Dark/Light Mode: Users can effortlessly toggle between themes to suit their preferences.
- Navigation: A simple menu facilitates easy access to different sections of the portfolio, enhancing user navigation.
